

Do not be spooked  
it is not as scary as you think

- 1 Drain Fuel** Completely drain the tank and fuel lines. Gasoline has a short shelf life; old gasoline may not work in the engine and could possibly cause damage.
- 2 Change Oil and Filters** This keeps your engine clean by preventing build-up of particles and foreign materials.
- 3 Check Spark Plugs** Replacing spark plugs at the end of the season is a cheap way to keep your engine running smoothly.
- 4 Clean and Inspect** Thoroughly remove any debris accumulation.
- 5 Storage** Store in a clean, dry location that offers protection from outside elements.

Refer to your user manual for your equipment's maintenance and care schedule.
