

# Ethanol and Marine Engines

All major marine engine manufacturers approve the use of ethanol blends of up to 10-percent.

---

As the world's cleanest and most affordable octane source, ethanol helps maximize engine performance.

---

The National Boat Racing Association (NBRA) uses E10 exclusively for all their races.

---

Ethanol reduces greenhouse gas emissions by 40-45%, meaning cleaner waterways and a better environment for marine life in lakes, streams and rivers.

---

For the past four years, each winning team of the Crappie Masters National Tournament Trail has used renewable ethanol in their boat engines.

---

The National Corn Growers Association is a proud co-sponsor of the 2019 Crappie Masters Tournament Trail.
